

Important Update About Your Battery

Battery pack references in the documentation

The documentation that comes with your Macintosh PowerBook incorrectly refers to a lithium-ion battery pack. The battery that comes with your PowerBook is a nickel-metal-hydride battery pack. Please note the following differences:

- The battery life you can expect from a NiMH battery pack is 2 1/2-5 hours, depending on the battery-saving features you use and the PowerBook 5300 model you have.
- Please disregard the information in the User's Guide for using the battery level indicator lights to monitor the battery charge. The NiMH battery packs do not have these indicator lights.
- The PowerBook 5300 Tour that comes on your computer's hard disk may mention the lithium-ion battery pack. Please disregard this reference.

Replacing your battery

The Macintosh PowerBook Lithium-Ion Rechargeable Battery for the Macintosh PowerBook 5300 series and 190 series (part number M3748LL/A) is not available as a replacement battery for your PowerBook.
